GRAYING GREEN: CLIMATE ACTION FOR AN AGING WORLD WORKSHOP

Mick Smyer, Ph.D.

Former Provost and current Professor of Psychology at Bucknell University

A national expert, Mick Smyer has written and lectured extensively on aging. In addition to holding leadership roles in national organizations on aging, Mick has also consulted with Fortune 500 companies, state and national legislative leaders, and higher education organizations on the impacts of aging.

Wednesday, March 7, 9-10 a.m.

Columbine Health Systems Center for Healthy Aging, Rm. 1418
CSU Health and Medical Center (corner of Prospect & College)

What's The Next Step On Your Climate Journey?

Graying Green links two global patterns: population aging and climate change. The Graying Green project works with climate communicators, climate scientists, community and business leaders to make older people more visible, valued, and effective on climate action. Older adults are not solely victims of climate change; they are also potential leaders of climate action. This workshop is geared to members of the Fort Collins community.

Each of us is on a climate journey, and we feel better when we know where we are and what our next step is. In this one-hour interactive workshop, Dr. Mick Smyer will help you move from anxiety to action on climate issues. By the end of the hour, you'll leave with a clear next step for your own action plan. A healthy planet is your legacy: Pass it on.

Admission is free but attendance is limited. RSVP required:
